3M Innovation

Scotch-Brite™ Clean and Strip XT-DC Disc

Scotch-Brite™ Clean and Strip XT DC Discs are constructed from a tough non-woven nylon web impregnated with silicon carbide mineral and bonded together with a phenolic resin. On one side of the disc is a fibreglass depressed centre plate for attachment to angle grinders.

Benefits

REDUCTION IN REWORK

- Reduces rework required after using some traditional coating and contaminate removal methods by leaving the original substrate with minimal abrasion.
- Open web provides maximum load – resistance while maintaining cutting efficiency throughout the life of the disc.
- Reduces risk of undercutting and gouging.

SAFER THAN WIRE TECHNOLOGY

- Provides an alternative to wire technology and reduces the risk of injury from loose flying wire elements to employees in the workplace.
- Open web non-loading design will dissipate heat and help to reduce warp lines, burning and discoloration.

FASTER MAXIMUM OPERATING SPEEDS

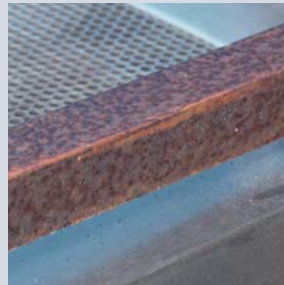

- With the support from the raised hub, you can now run the Scotch-Brite Clean and Strip Disc faster than ever before allowing the use of larger size discs on angle grinders instead of only sander polishers.
- The faster speeds allow the product to complete the task faster than ever before.

Applications

MAINTENANCE CLEANING

- Gasket removal and clean up
- Removal of painted epoxies
- Pipeline cleaning
- Pump refurbishment and maintenance
- Weather board reconditioning
- Guttering and downpipe reconditioning

PRE/POST WELD CLEANING

- Pre weld contamination and scale clean up
- Post weld blueing removal
- Removal of light weld splatter

SURFACE COATING REMOVAL

- Rust
- Oxidation
- Paint
- Inks
- Gasket adhesive
